We build everything to last.

Including our reputation.

The Equipment You Need. Built to Spec. Built to Work. Built to Last.

Looking for a reliable partner to provide the equipment and parts you need? We have over six decades of experience as a prototype-to-production machinery builder for low to medium volume, from component parts to complete machines.

Our seasoned team of machinists, fabricators, assemblers and controls technicians are augmented by complete in-house engineering services — so we can build to your specs or design a solution from the ground up.

Our completely tooled machine shop and large assembly area give us the capability to work with a wide variety of materials and technology. And we're centrally located for rapid response when you need us.

Most important, we work closely with you at every stage of the process, from planning and engineering to prototype and production, to provide the precision, quality and performance you demand.

WE PROVIDE:

Contract Machining and Fabrication

From component parts to assemblies and even complete machines, we can finish and assemble parts onsite, with expedited service available to you or your end users. Our CNC's Machining Centers — including multi-axis capabilities — work with plastics, aluminum, brass, stainless steel and tool steel, from prototype to production (average 1 to 1,000 parts or more), with in-house secondary processes and engineering assistance.

Machine Building

From simple to complex, and from prototype to production and testing, our team of machine building specialists can work to your design specifications, custom design and build, fabricate and assemble, retool or rebuild — even developing from an existing machine without documentation.

Machinery Upgrades

Extend equipment life, incorporate upgrades such as safety protocols and new control systems, or retrofit, recondition or repair to meet changing needs and standards — from mechanical, electric, pneumatic and hydraulic systems to integrated PLC and HMI control systems. Our services include reverse engineering, technical support, documentation, installation, integration, product design and project management.

Custom Design Machinery

We engineer, build and install custom machines for a range of industries, analyzing your needs and creating solutions to enhance your processes — or building to your specifications — with an experienced team of in-house design, mechanical and electrical engineers specializing in the science and art of machine building.

Control Systems

Our in-house electrical engineers offer state-of-the-art control systems and stand-alone designs per your requirements, from basic to complex — including PLC and HMI program design, motion control and equipment operation, panel layout drawings, panel building and wiring, machine wiring, testing, start-ups and cable/harness fabrications.

CNC Fixturing / Tooling

We design and fabricate dedicated work holding fixtures and turnkey systems, programming services and fabricated CNC fixturing and tooling based upon your design — including both work cell structures and dedicated stand-alone machines — all thoroughly tested and factory approved prior to shipment. Our individual or multiple product fixturing includes hydraulic or pneumatic product clamping to suit application. And we specialize in fixturing for vertical and horizontal CNC machines.

For the equipment and parts you need to keep everything in motion, call pāco manufacturing at 812.283.7963, or visit us online at pacomanufacturing.com.

Reliable, Responsive Machine Building.

When it has to work, and it has to last, call pāco manufacturing. We specialize in complete machine building, with engineering assistance from prototype to production, and a highly trained team dedicated to building superior quality machinery.

From simple machines to complex automated systems, we build to your design specifications, custom design and build, fabricate and assemble, retool or rebuild. We can even develop a new machine from an existing one without existing documentation.

We have decades of experience, a seasoned team of machinists, fabricators, assemblers and controls technicians, complete in-house engineering services, a fully tooled machine shop, a large assembly space and a central location for rapid response when you need us.

Most important, we work closely with you at every stage of the process, from planning and engineering to prototype and production, to provide the precision and performance you demand. To make pāco manufacturing your one-source partnership for your manufacturing and assembly requirements, call us at **812.283.7963** or visit **pacomanufacturing.com** to learn more.

Quality Equipment for Industry

We're Control Systems Specialists.

Whether you need state-of-the-art control systems to operate your equipment or stand-alone designs built to your requirements, call the experts at pāco manufacturing.

From basic controls to complex systems, including implementation of motion control and equipment operation, machine wiring, testing, start-ups and cable/harness fabrications, our in-house electrical engineers are control systems specialists. We provide panel layout drawings, control, PLC and HMI program design, control panel fabrication, assembly and testing and more.

We have decades of experience, a seasoned team of machinists, fabricators, assemblers and controls technicians, complete in-house engineering services, a fully tooled machine shop, a large assembly area and a central location for rapid response when you need us.

To make pāco manufacturing your one-source partnership for control systems and more, call us at **812.283.7963** or visit **pacomanufacturing.com** to learn more.
